

Floristoon Lighting

Floristoon is a unique, patented 110 volt fluorescent lighting system developed by Blakley Electrics specifically for temporary installations.

The system comprises of 100M lengths of 1.5mm² or 2.5mm² 3 core PVC Arctic Grade cable with a unique, 3 pin, IP2X outlet moulded at 5M, 7M or 10M intervals.

Fluorescent fittings are anti-corrosion, IP65 type and are available as 5' singles or 2' twins, with or without 3 hour maintained emergency battery packs. Fittings are supplied with tubes and suspension hooks and are pre-wired with a 2M, 1.5mm², 3 core input lead, which incorporates a moulded-on 3 pin Flori adaptor. Adaptors can also be purchased as loose items.

Once the Floristoon cable and fittings have been hung, electrical connection is made simply by inserting and twisting the unique 3 pin Flori-2X adaptor into a moulded-on Flori-2X outlet. As Floristoon utilises 3C cable only, circuits with emergency fittings should be permanently energised to avoid damaging tubes and battery packs through repetitive discharging.
