

## CELLBRITE: MAXILite

The MAXILite 3200 is a totally portable, powerful, safe, rechargeable light source used by the emergency services, the military and the railways amongst others. MAXILite is cool running, has no trailing cables, is made from non conductive materials and can be used in remote or confined locations.

The 24A dry lead acid battery will power the 42 Watt fluorescent lamp for nine hours providing a light output of 3200 lumens. To charge the unit from a fully depleted state takes 6 hours using the standard power pack and intelligent charger, which is included in the standard MAXILite package.

The battery cannot be overcharged or damaged by being left on charge. The battery charger is 'intelligent' and shows that charging is underway with a red light and that the battery is fully charged with a green light.

The light head has a robust polycarbonate diffuser which allows easy access to the lamp. The head can be mounted on the battery pack directly, providing a stable base, or used with the standard 1m - 2.2m telescopic pole. In addition there are the options of a suction base, gripper clamp or magnetic base. In all cases the head will swivel into almost any position for maximum flexibility.

The base, housing the battery, is manufactured from polyethylene, which makes the unit impervious to rust and light weight. It also makes the enclosure non conductive for extra safety. MAXILite is suitable for use outdoors.

**Options include:**

- 38A power pack - Item Number S170166
- Magnetic Base - Item Number S140216
- Suction base - Item Number S140252
- Gripper clamp - Item Number S140215
- 5m 12V ext. lead - Item Number S140213
- Carrying bag - Item Number S140214
- 6 way Multi-charger - Item Number S140255
- 16A output charger - Item Number S140256 \*

\* For charging the MAXILite whilst it is in use.

Item Number

S140192

Type

MAXI42W/24A/ C/W Mains charger
