

OUTDOOR PILLARS

Blakley Outdoor Pillars can be supplied as empty enclosures for equipping on site or they can be supplied as fully equipped and tested factory built assemblies.

The standard range has been updated and a wider range of sizes is available. A heavier duty form of construction has been adopted and hot dip galvanized finish is now standard. A wide range of optional extras is offered and all pillars are supplied with removable roots.

Enclosures

Blakley pillars are now fabricated from 3.0 mm mild steel and incorporate a hot dip galvanized natural finish (a painted top coat is an optional extra). A typical life span of 20 years can be expected, dependent on the environmental conditions and the maintenance regime.

The enclosures are vandal resistant and provide protection to IP54. As standard they incorporate a water repellent timber backboard, triangular key lockable doors and a removable root is included. Standard sizes and optional extras are detailed below. General arrangements are shown on Blakley Electrics drawing C16868, which can be downloaded from our website.

Ingress Protection

Blakley Outdoor Pillars can be supplied with a range of IP ratings to meet the requirements of the installation. As standard, non-ventilated pillars are manufactured to IP54 and vented pillars to IP33. The IP33 version provides a high degree of protection against the elements whilst allowing ventilation for transformers, lighting control gear, etc.

Climate Control

A range of measures can be incorporated to control the micro environment within the pillar, including sun shade canopies, thermostatically controlled anti-condensation heaters and ventilation fans.

Pillar with optional painted finish

Optional Extras	
3 Point Locking	Inset Plate Fixings
Yale Lock	Internal Gland Plates
Padlockable	Vents to IP33
Painted Finish - Please Specify Colour	

Part Numbers	Dimensions, mm	No. of Doors
